PC Mag Series 80 Software Catalog/Computer 6.0PC Mag/Jung Peachtree Complete Accounting Version 6/Win's federal practices step-by-step, as well as all the newest innovations in the field. D. W. attribute return different value in method and tag in my W website. I've set an attribute in my controller to the class that called the method. The attribute is called 'v'. The attribute is different in the tag than in the method. This is my code in the controller: protected function getAjax() { return array('v' => new yii\web\Expression(MYClass::getAjax())); } and this is how I'm setting it in the view file (this is not the view file actually using, I'm just simplifying): widget('bootstrap.widgets.TButton', array('type' => 'form', 'class' => 'btn btn-default', 'htmlOptions' => array('data-af' =>
